Current position

29/11/2024→ ongoing Professor (Associate) in Applied botany (SSD: BIOS-01/C)
Plant ecology, applied ecology, functional ecology, agroecology, global change biology and plant community: studies on plant ecology from individual to community level.
UNIVERSITÀ DEGLI STUDI DI UDINE. DIPARTIMENTO DI SCIENZE AGROALIMENTARI, AMBIENTALI E ANIMALI. Via delle Scienze, 206 - 33100 UDINE

National Scientific Qualification

01/12/2023 al 01/12/2034 National Scientific Qualification for the position of **Full Professor** (art. 16 della L. 240/10) in Plant Science (05/A1 Botanica).

Research

Profile Francesco Boscutti does research in Plant Science, focusing on Plant Ecology and Applied Botany. His main research projects focus on the ecological processes that drive plant responses to global change. Studies and experiments investigate both terrestrial, with particular regard to Alpine tundra, and coastal ecosystems using a functional and multiple-scale approach from individual to ecosystem and landscape scales. Main attention is paid to studies on plant responses to drought, ecological gradients (e.g. alpine and coastal), biological invasion and restoration and agro-ecology. Skills in the processing of biological data both for analysis (biostatistics - R software) and for data management and storage (database), management of spatial data in GIS systems and remote sensing.

Key topic Plant ecology, Applied Ecology, Biological invasion, Quantitative vegetation analysis, Vegetation Ecology, Climate change and plant communities, Restoration Ecology, Biodiversity, Agro ecology, Disturbance ecology, Functional ecology, GIS vegetation mapping, LiDAR vegetation mapping
