BACKGROUND OF THE PROJECT

Although Patient Safety (PS) is a fundamental principle of health care (WHO, 2018), evidence suggests that a significant number of patients are often unintentionally injured whilst receiving health care, resulting in permanent injury, disability, increased length of hospital stay or even death. Hence, the need to intervene effectively by strengthening the knowledge and skills of the nursing staff. Nurses as the largest group of healthcare providers, have a central role in patient care with unique perspective in assessing and promoting PS in care settings

THE CHALLENGE

To reduce missed nursing care, omissions and inappropriate nursing care rationing

To improve the quality of the nursing work environments

TARGET GROUP: NURSE MANAGERS

Key roles for patient safety who need a wide range of knowledge and skills in order to create a safe working environment in which best practices of human resource planning and development, leadership, teamwork techniques and effective change management can be applied

MILESTONES OF THE PROJECT

- Creating a "professional kit" of tools to strengthen the skills, implement and evaluate the best practices to be applied to the daily nursing activity
- Developing a specific training course for Nurse Managers in order to increase their knowledge and skills
- Creating an online platform which will guarantee free access to the curriculum
- Training implementation and evaluation of the knowledge acquired

WHY IS THE PROJECT INNOVATIVE?

It focuses on the role of the Nurse Managers to ensure patient safety and quality of care
It integrates knowledge and skills related to different contexts and countries
